

Mozilla

Mozilla is an application suite that includes a browser and email client. However, the company that made Mozilla is no longer updating or supporting it. Updates to Mozilla are now being handled by the open source community who have renamed the software **SeaMonkey**. The interface to SeaMonkey is identical to the Mozilla Application Suite. For more information on SeaMonkey and Mozilla, please visit these links:

- [Wikipedia article on SeaMonkey](#)

If you are still using Mozilla, we suggest you upgrade to SeaMonkey. See below for instructions on installing SeaMonkey for Macs and PC's. Please note that if you are needing this on a school-owned computer, it will most likely need to be done by someone with Administrative Privileges. Please contact us so we can assist you with getting the software installed.
